PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with hands-on experience building scalable APIs, authentication systems, resume parsing pipelines, and real-time applications. Strong knowledge of Python, FastAPI, PostgreSQL, Redis, Docker, SQLAlchemy, Alembic, REST APIs, JWT authentication, testing, and microservice architecture. Interested in AI-powered developer tools and interview preparation platforms.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java

Backend: FastAPI, Flask, REST API, WebSocket, Pydantic, SQLAlchemy Async, Alembic

Frontend: React, Tailwind CSS, Zustand, HTML, CSS

Database: PostgreSQL, MySQL, Redis

DevOps & Tools: Docker, Docker Compose, Git, GitHub Actions, Linux, Postman, Swagger UI

Testing: Pytest, Pytest-Asyncio, Unit Testing, Integration Testing

Concepts: Microservices, JWT, Refresh Token Rotation, Rate Limiting, Repository Pattern, Dependency Injection

WORK EXPERIENCE

Backend Developer Intern - TechNova Solutions | Remote | Jan 2026 - Jun 2026

- Built REST APIs using FastAPI, PostgreSQL, SQLAlchemy Async, and Pydantic for an internal hiring dashboard.
- Implemented JWT authentication, refresh token rotation, role-based access checks, and secure password hashing.
- Created Alembic migrations and repository-layer abstractions to improve maintainability.
- Improved API response time by optimizing database queries and adding Redis caching for frequently accessed records.

Full Stack Developer - CodeCraft Labs | Lucknow, India | Aug 2025 - Dec 2025

- Developed React and Tailwind dashboard pages for resume upload, profile analysis, and interview tracking.
- Integrated FastAPI backend services with frontend using Axios and protected routes.
- Wrote pytest-based integration tests for upload APIs, authentication flows, and database operations.

PROJECTS

AI Interview Preparation Platform | FastAPI, React, PostgreSQL, Redis, Docker, WebSocket

- Designed a microservice-based platform with auth-service, resume-service, api-gateway, ai-service, and analytics-service.
- Implemented resume upload, text extraction, regex parsing, normalized storage for skills, education, projects, and experience.
- Added request tracing, gateway-level JWT validation, service-to-service headers, and rate limiting with Redis.
- Planned AI feedback engine for mock interviews, ATS scoring, missing keyword detection, and coding interview evaluation.

Library Seat Management System | FastAPI, React, Redis, PostgreSQL, WebSocket

- Built real-time seat booking system with seat locking, Redis expiry, payment status handling, and WebSocket updates.
- Implemented JWT login, booking history, admin dashboard, and conflict-safe seat reservation flow.

Sync Music Platform | FastAPI, WebSocket, Redis, React

- Created real-time music room synchronization with heartbeat tracking and playback drift correction.
- Handled duplicate user sessions, room join/leave events, and synchronized play/pause/seek commands.

EDUCATION

Bachelor of Technology in Computer Science and Engineering

Lucknow Institute of Technology, Lucknow | 2022 - 2026

Relevant Coursework: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, Software Engineering

CERTIFICATIONS

- FastAPI Backend Development - Practical API Design
- PostgreSQL and SQL Query Optimization
- Docker for Developers
- Git and GitHub Workflow Fundamentals

ACHIEVEMENTS

- Solved 250+ DSA problems on coding platforms.
- Built multiple production-style backend services using clean architecture and repository pattern.
- Created CI pipeline using GitHub Actions for backend test automation.
